DETAILED ACTION

1. The amendment filed 08/09/2005 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is the recitation at the end of claims 1 and 5 that “a number of lock cycles required for computing an output of the IIR filter is independent of a number of filter coefficients of the IIR filter”

Applicant is required to cancel the new matter in the reply to this Office Action.

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-18 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In particular, the recitation at the end of claims 1 and 5 that “a number of lock cycles required for computing an output of the IIR filter is independent of a number of filter coefficients of the IIR filter” is not supported by the original disclosure.

4. Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per claim 1, the recitations “a parallel n-th order IIR filter”, line 1, and “operating ... on a time-sharing basis a plurality of time”, line 4, are in definite as contracting to each other; claim 5 also has the same problem. Further, it is indefinite as whether “the IIR filter”, line 8, refers to the n-th order IIR filter or the IIR filter of order less than n; this problem is also found in claims 3-5, 7 and 8.

5. Claims 1-8 stand rejected under 35 U.S.C. 102(b) as being clearly anticipated by Constant (4,228,517).

Constant discloses in figures 1 and 2 an n-order IIR filter implemented by a lower-order IIR filter in a time-sharing basis, including means (3) as the claimed decoder for sequentially sets the filter coefficients (β) to the lower-order IIR filter (24,26-29), and the number of clock cycles required for computing an output of the IIR filter clearly independent of the values of the coefficients as the delay line sequentially sets coefficients one by one to the lower order IIR filter regardless the values of the coefficients.

6. Applicant's arguments filed 08/09/2005 have been fully considered but they are not persuasive because the feature that the applicant argues is not supported by the original disclosure.

7. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
